

Wireless two-channel receiver, 12-24 VAC or VDC, for surface mounting

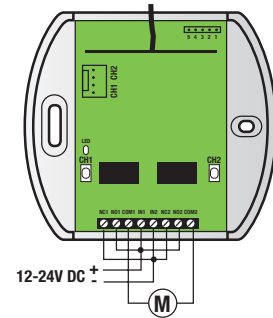

The two-channel receiver for surface mounting has four operating modes. Wireless transmitters can be connected to this receiver. An external pulse push button can also be connected per channel. The receiver can only be used for switching low-voltage loads. Possible applications: two-button control (on/off functions), push-button functions (on for as long the push button is pressed), pulse function (1 s) or two-button control (roll-down shutters/venetian blinds). The roll-down shutter/venetian blind function can only be supplied with direct current (dc).

Surface-mounting RF receiver with 2 channels, 12-24 V AC or DC

This surface-mounting receiver has 4 operating modes. You can connect one external impulse push button per channel. You may only use the device for switching low-voltage loads. The device has the following applications:

- ON/OFF via a 2-button function;
- ON when pressed and held, via push button function;
- control of roller blinds or shutters via 2-button function.

The roller blind and shutter function may only be supplied with direct current (DC).

Technical characteristics:

- power supply voltage: 12-24 V AC or DC;
- maximum contact load: AC - 24 V, 1 A (24 VA); DC - 30 V, 1 A (30 W);
- dimensions: W70xH63xD35 mm.
